National 5 Engineering Science Assignment Finalised Marking Instructions

© Scottish Qualifications Authority 2020

These marking instructions are prepared by examination teams for use by SQA appointed markers when marking external course assessments.

Please note, although we were not able to carry out live marking in 2020, these marking instructions are presented in a final state and have been referenced against limited candidate responses.

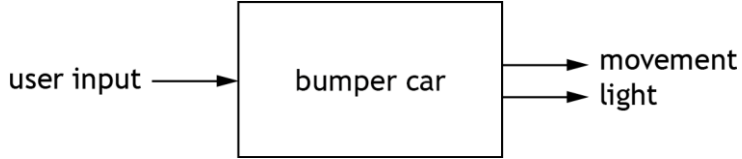

The information in this document may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from permissions@sqa.org.uk.

Marking instructions

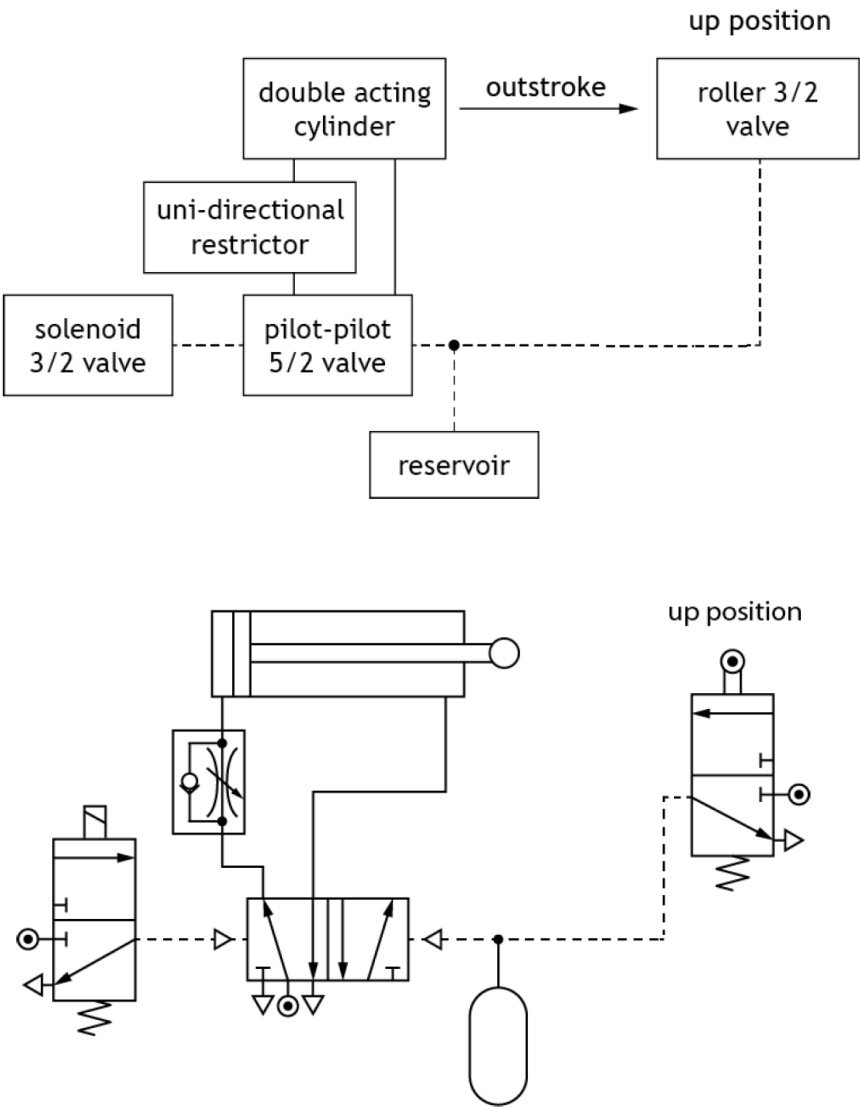

General marking principles

This information is provided to help you understand the general principles that must be applied when marking candidate responses in this assignment. These principles must be read in conjunction with the detailed/specific marking instructions, which identify the key features required in candidate responses.

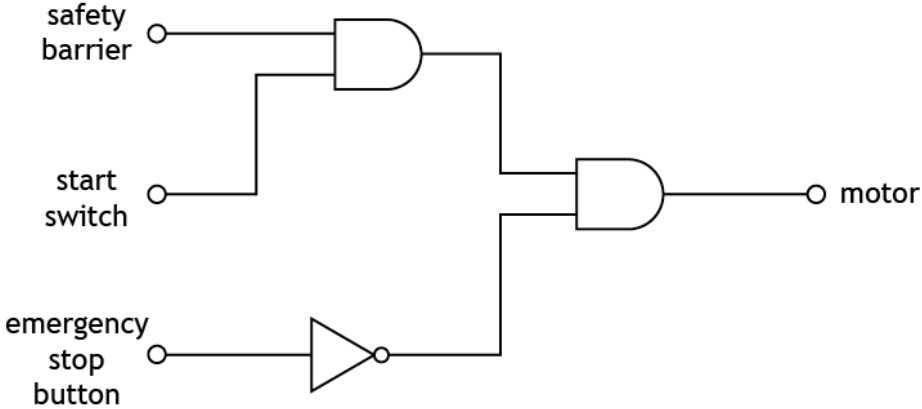

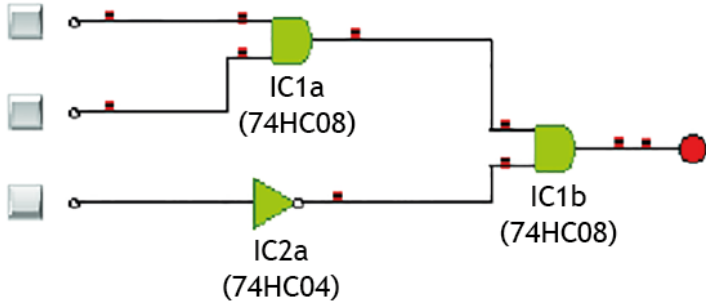

- a Marks for each candidate response must always be assigned in line with these general marking principles and the specific marking instructions for this assessment.
- b Marking should always be positive. This means that, for each candidate response, marks are accumulated for the demonstration of relevant skills, knowledge and understanding: they are not deducted from a maximum on the basis of errors or omissions.
- c If a specific candidate response is not covered by either the general marking principles or detailed marking instructions, you must seek guidance from your team leader.

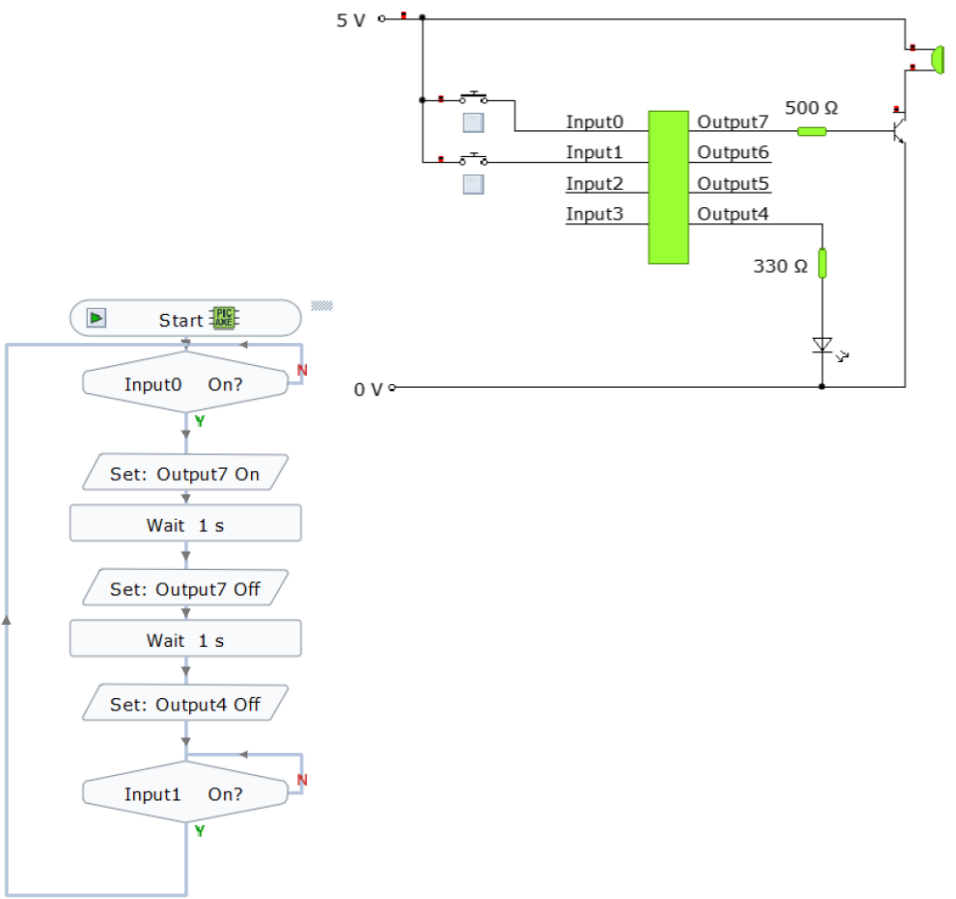

Task			Expected response	Max mark	Additional guidance
1.	a		 <pre> graph LR UI[user input] --> BC[bumper car] BC --> M[movement] BC --> L[light] </pre>	2	<ul style="list-style-type: none"> User input / action identified and in the correct position (1 mark) <p>Accept kinetic as input</p> <ul style="list-style-type: none"> Light and movement outputs identified and in the correct position (1 mark) <p>Accept kinetic / (desired) speed as output</p> <p>Do not accept input or output components</p> <p>Ignore extra boxes or words.</p> <p>If no arrows shown assume left to right.</p>

Task			Expected response	Max mark	Additional guidance
1.	b		<pre> graph LR subgraph SystemBoundary [] direction LR AP[accelerator pedal] --> MC[microcontroller] SS[speed sensor] --> MC MC --> D1[driver] MC --> D2[driver] D1 --> M[motor] D2 --> LED[LED] M --> MOV[movement] LED --> L[light] end UI[user input] --> AP </pre>	6	<ul style="list-style-type: none"> • Sensor (for measuring speed) connected directly to microcontroller (1 mark) <p>Do not accept speedometer.</p> <ul style="list-style-type: none"> • Feedback loop from motor output into microcontroller, with arrow-head (1 mark) • One driver per output device individually connected to microcontroller (1 mark) • Motor in output position (1 mark) • LED (strip) in output position (1 mark) • System boundary around sub-systems only and boxes around each sub-system and acceptable input and outputs stated in 1a for each device (1 mark) <p>Allow FTE for input and outputs from 1a</p> <p>Do not accept an action (e.g. motor on)</p> <p>Ignore additional sub-systems.</p> <p>Ignore misplaced sensor sub-system.</p> <p>Ignore boxes around input/outputs.</p> <p>If no arrows shown assume left to right</p>

Task	Expected response	Max mark	Additional guidance
2. a		6	<p>Block diagram, circuit diagram (or a hybrid) or constructed/simulated.</p> <p>Components identified or implied (e.g. UDR) by name or symbols.</p> <p>Connections between components and valves must be shown. Ignore line types. Port to port piping is not required.</p> <ul style="list-style-type: none"> • 5/2 valve with two connections to double acting cylinder (with outstroke direction identified if necessary) (1 mark) • Uni-directional restrictor used to slow instroke of piston (1 mark) <p>Ignore orientation of uni-directional restrictor</p> <ul style="list-style-type: none"> • 2 x 3/2 valves piped to 5/2 (1 mark) • Solenoid actuator to cause outstroke (1 mark) <p>Do not accept “electrical” actuator</p> <ul style="list-style-type: none"> • Any actuator to sense up position except push button, lever, pilot or spring return (1 mark) • Reservoir before piston instrokes (on signal line between up position 3/2 and 5/2) (1 mark) <p>Ignore any time delay uni-directional restrictor</p>

Task			Expected response			Max mark	Additional guidance
2.	b		Specification point	Planned test	Expected result	3	<p>Responses must be descriptive.</p> <ul style="list-style-type: none"> Test for (electrically) actuating / sending signal to electrical actuator/solenoid or 3/2 valve (1 mark) <p>Do not accept “actuator receives signal” on its own.</p> <ul style="list-style-type: none"> Result for piston outstroking and at full speed (1 mark) Result for after time delay (implied) and piston instroking and slowly/smoothly (1 mark) <p>Do not apply FTE from candidate’s design / circuit in 2a</p>
			i.	Actuate the electrical actuator / actuate the (first) 3/2 valve	The piston should outstroke at full speed.		
			ii and iii.	Actuate the second 3/2 valve.	After a time delay the piston instrokes slowly.		

Task			Expected response	Max mark	Additional guidance
3.	a			3	<ul style="list-style-type: none"> NOT gate connected to emergency stop button (1 mark) AND gate connected to safety barrier and start switch (1 mark) 2nd AND gate connected to first AND gate and (NOT) emergency stop button (1 mark) <p>Accept alternative correct logic diagram</p> <p>If simulated/constructed (0 marks)</p> <p>If evidence is only provided for 3(b) then no marks can be awarded for design.</p>
	b			1	<ul style="list-style-type: none"> Correctly connected logic gates (from design in 3a) with suitable input (and output) devices (1 mark) <p>If constructed, IC numbers must be clearly labelled.</p>

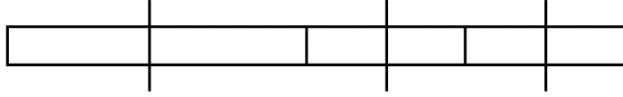

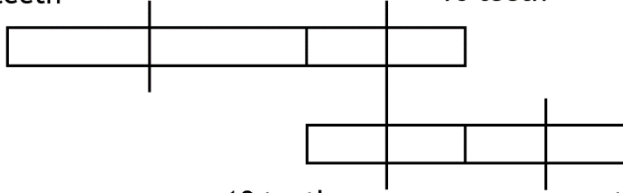

Task	Expected response	Max mark	Additional guidance
4. a	 <p>The diagram shows an electronic circuit and a corresponding flowchart. The circuit includes a 5V power supply, a 0V ground, and a microcontroller with pins Input0, Input1, Input2, Input3, Output7, Output6, Output5, and Output4. A green LED is connected to Output7 through a 500 Ω resistor. A 330 Ω resistor is connected to Output4, which is also connected to a diode. The flowchart starts with a 'Start' block, followed by a decision 'Input0 On?'. If 'Y' (Yes), it sets Output7 On, waits 1 s, sets Output7 Off, waits 1 s, sets Output4 Off, and then a decision 'Input1 On?'. If 'Y' (Yes), it loops back to the 'Input0 On?' decision. If 'N' (No) at either decision, it proceeds to the next step in the sequence.</p>	5	<p>Electronic circuit</p> <ul style="list-style-type: none"> all correct components selected and wiring attempted (1 mark) correct wiring, microcontroller pin numbers and connections, component orientations and component values (1 mark) <p>If pin numbers are not visible on microcontroller refer to flowchart</p> <p>Allow use of alternative microcontrollers other than 8-pin</p> <p>If electronic circuit constructed allow use of alternative pin numbers appropriate to hardware used</p> <p>Flowchart</p> <ul style="list-style-type: none"> correct symbols (to the software) with feedback loops exactly as shown (1 mark) all correct pin numbers (FTE from circuit), pin states, decisions and time delays (1 mark) <p>Integration</p> <ul style="list-style-type: none"> flowchart and electronic circuit (1 mark)

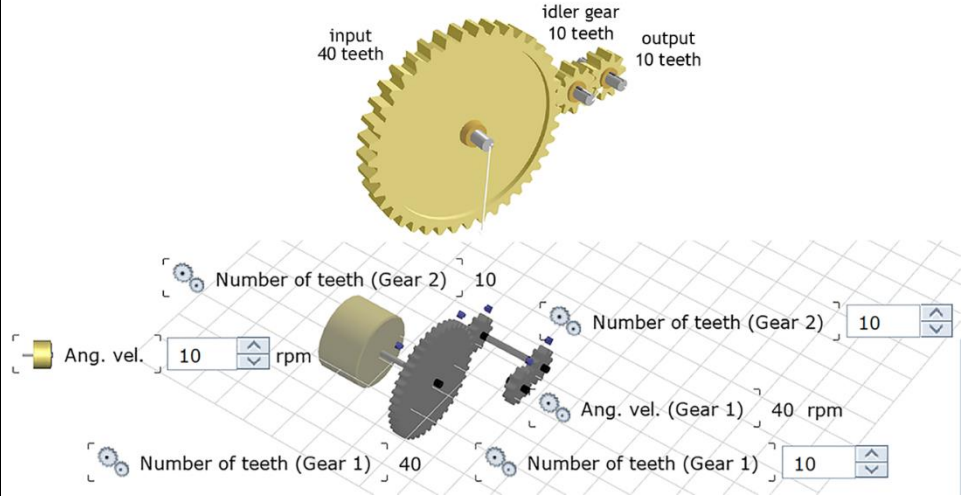

Task			Expected response				Max mark	Additional guidance
4.	b		Planned test	Expected result	Initial test result	Amended test result	6	<p>Do not accept direct copy from Expected Results as Amended Test Result.</p> <p>Accept correct pin numbers in place of components.</p> <p>Test 1a</p> <ul style="list-style-type: none"> Identification of buzzer sounding/on and number of times (apply FTE from 4a) (1 mark) Description of correct amended result (or apply FTE from 4c) (1 mark) <p>Test 1b</p> <ul style="list-style-type: none"> Identification of buzzer sounding/on and LED not turning on (apply FTE from 4a) (1 mark) Description of correct amended result referring to both buzzer and LED (or apply FTE from 4c) (1 mark) <p>Test 2</p> <ul style="list-style-type: none"> Identification of LED not turning off and system repeating / looping back to start (apply FTE from test 1b results and/or 4a and/or 4c) (1 mark) Description of correct amended result referring to both LED and system repeating (or apply FTE from 4c) (1 mark)
			Test 1a Press the set switch.	The buzzer should sound 3 times.	Buzzer only sounds once.	The buzzer sounds 3 times.		
			Test 1b Press the set switch.	Once buzzer has sounded the LED should turn on.	After the buzzer sounds the LED does not turn on.	After the buzzer sounds the LED turns on.		
			Test 2 Press the reset switch.	The LED should turn off and the system should repeat.	LED does not turn off but the system repeats.	The LED turns off and the system repeats.		

Task	Expected response	Max mark	Additional guidance
4. c		3	<p>Test 1a amendment</p> <ul style="list-style-type: none"> • Addition of repeating 3 times, to achieve buzzer pulsing on and off, in correct position (1 mark) <p>Apply FTE for amendment(s) to flowchart and/or circuit to meet Amended Test (1a) Result in 4b.</p> <p>Test 1b amendment</p> <ul style="list-style-type: none"> • Correction of output 4 off to on / addition of output 4 on (between output 7 on and input 1 decision) (1 mark) <p>Apply FTE for amendment(s) to flowchart and/or circuit to meet Amended Test (1b) Result in 4b.</p> <p>Test 2 amendment</p> <ul style="list-style-type: none"> • Output 4 off in appropriate position (bottom or top of flowchart). (1 mark) <p>Apply FTE for amendment(s) to flowchart and/or circuit to meet Amended Test (2) Result in 4b.</p> <p>Ignore any additional steps.</p>

Task			Expected response	Max mark	Additional guidance
4.	d		<pre> label0: if Input0 = 1 then label1 goto label0 label1: let loop1 = 3 do high 7 pause 1000 low 7 pause 1000 let loop1 = loop1 - 1 loop while loop1 > 0 high 4 label2: if Input1 = 1 then label3 goto label2 label3: low 4 goto label0 </pre>	1	<ul style="list-style-type: none"> Correct code and pin numbers to fully match the candidate's final flowchart (1 mark) <p>Accept manually written, automatically generated or a hybrid.</p> <p>Any high level language acceptable.</p>

Task			Expected response			Max mark	Additional guidance
4.	e		Spec point	Met? Y/N	Description of performance	4	<p>Responses must be based on evidence from 4b. In absence of 4b refer to 4c.</p> <ul style="list-style-type: none"> State whether specification point i was met with description referring to (set) switch and buzzer sounding and number of times (1 mark) State whether specification point ii was met with description referring to the LEDs operation after the buzzer has sounded (1 mark) State whether specification point iii was met with description referring to reset switch and LED operation and system repeating (1 mark) Appropriate justification of suggested improvement to the circuit or flowchart. Must refer to why this is an improvement for the operators (stated or implied). (1 mark) <p>Do not accept “people” / “person” on its own.</p> <p>Do not accept removal of human error as an explanation for improvement.</p>
			i.	Y	When the set switch was pressed the buzzer did sound 3 times.		
			ii.	Y	After the buzzer has sounded the LED turned on.		
			iii.	Y	After the reset switch was pressed the LED turned off and the system looped back to the start.		
			Suggested improvement		<p>Make the buzzer sound more times / increase the length of the delays / make it sound continuously.</p> <p>Have LED flash (at same time as buzzer).</p>		
			Explanation for improvement		<p>Gives the operators more warning.</p> <p>More noticeable indicator for the operators (if it is noisy).</p>
