

2019 Applications of Mathematics National 5 - Paper 1 Finalised Marking Instructions

© Scottish Qualifications Authority 2019

These marking instructions have been prepared by examination teams for use by SQA appointed markers when marking external course assessments.

The information in this document may be reproduced in support of SQA qualifications only on a non-commercial basis. If it is reproduced, SQA must be clearly acknowledged as the source. If it is to be reproduced for any other purpose, written permission must be obtained from permissions@sqa.org.uk.

General marking principles for National Applications of Mathematics

Always apply these general principles. Use them in conjunction with the detailed marking instructions, which identify the key features required in candidates' responses.

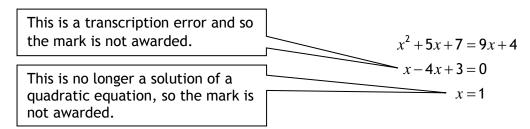

For each question, the marking instructions are generally in two sections:

- generic scheme this indicates why each mark is awarded
- illustrative scheme this covers methods which are commonly seen throughout the marking

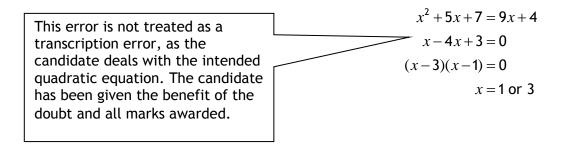

In general, you should use the illustrative scheme. Only use the generic scheme where a candidate has used a method not covered in the illustrative scheme.

- (a) Always use positive marking. This means candidates accumulate marks for the demonstration of relevant skills, knowledge and understanding; marks are not deducted for errors or omissions.
- (b) If you are uncertain how to assess a specific candidate response because it is not covered by the general marking principles or the detailed marking instructions, you must seek guidance from your team leader.
- (c) One mark is available for each •. There are no half marks.
- (d) If a candidate's response contains an error, all working subsequent to this error must still be marked. Only award marks if the level of difficulty in their working is similar to the level of difficulty in the illustrative scheme.
- (e) Only award full marks where the solution contains appropriate working. A correct answer with no working receives no mark, unless specifically mentioned in the marking instructions.
- (f) Candidates may use any mathematically correct method to answer questions, except in cases where a particular method is specified or excluded.
- (g) If an error is trivial, casual or insignificant, for example $6 \times 6 = 12$, candidates lose the opportunity to gain a mark, except for instances such as the second example in point (h) overleaf.

(h) If a candidate makes a transcription error (question paper to script or within script), they lose the opportunity to gain the next process mark, for example

The following example is an exception to the above

(i) Horizontal/vertical marking

If a question results in two pairs of solutions, apply the following technique, but only if indicated in the detailed marking instructions for the question.

Example:

•5 •6
•5
$$x = 2$$
 $x = -4$
•6 $y = 5$ $y = -7$

Horizontal:
$$\bullet^5 x = 2$$
 and $x = -4$ Vertical: $\bullet^5 x = 2$ and $y = 5$ $\bullet^6 y = 5$ and $y = -7$ $\bullet^6 x = -4$ and $y = -7$

You must choose whichever method benefits the candidate, **not** a combination of both.

(j) In final answers, candidates should simplify numerical values as far as possible unless specifically mentioned in the detailed marking instruction. For example

$$\frac{15}{12} \text{ must be simplified to } \frac{5}{4} \text{ or } 1\frac{1}{4} \qquad \frac{43}{1} \text{ must be simplified to } 43$$

$$\frac{15}{0 \cdot 3} \text{ must be simplified to } 50 \qquad \frac{\frac{4}{5}}{3} \text{ must be simplified to } \frac{4}{15}$$

$$\sqrt{64} \text{ must be simplified to } 8^*$$

*The square root of perfect squares up to and including 100 must be known.

- (k) Commonly Observed Responses (COR) are shown in the marking instructions to help mark common and/or non-routine solutions. CORs may also be used as a guide when marking similar non-routine candidate responses.
- (I) Do not penalise candidates for any of the following, unless specifically mentioned in the detailed marking instructions:
 - working subsequent to a correct answer
 - correct working in the wrong part of a question
 - legitimate variations in numerical answers/algebraic expressions, for example angles in degrees rounded to nearest degree
 - omission of units
 - bad form (bad form only becomes bad form if subsequent working is correct), for example

$$(x^3 + 2x^2 + 3x + 2)(2x + 1)$$
 written as
 $(x^3 + 2x^2 + 3x + 2) \times 2x + 1$
 $= 2x^4 + 5x^3 + 8x^2 + 7x + 2$
gains full credit

- repeated error within a question, but not between questions or papers
- (m) In any 'Show that...' question, where candidates have to arrive at a required result, the last mark is not awarded as a follow-through from a previous error, unless specified in the detailed marking instructions.
- (n) You must check all working carefully, even where a fundamental misunderstanding is apparent early in a candidate's response. You may still be able to award marks later in the question so you must refer continually to the marking instructions. The appearance of the correct answer does not necessarily indicate that you can award all the available marks to a candidate.
- (o) You should mark legible scored-out working that has not been replaced. However, if the scored-out working has been replaced, you must only mark the replacement working.
- (p) If candidates make multiple attempts using the same strategy and do not identify their final answer, mark all attempts and award the lowest mark. If candidates try different valid strategies, apply the above rule to attempts within each strategy and then award the highest mark.

For example:

| Strategy 1 attempt 1 is worth 3 marks. | Strategy 2 attempt 1 is worth 1 mark. |
|--|--|
| Strategy 1 attempt 2 is worth 4 marks. | Strategy 2 attempt 2 is worth 5 marks. |
| From the attempts using strategy 1, the resultant mark would be 3. | From the attempts using strategy 2, the resultant mark would be 1. |

In this case, award 3 marks.

Detailed marking instructions for each question

| Question | | n | Generic scheme | Illustrative scheme | Max mark |
|----------|--|---|---|--|-------------|
| 1. | | | •¹ Process: calculate limits | •¹ 22·3 and 22·7 | 3 |
| | | | •² Process: identify rejected candles (or accepted candles) | •² 22·2, 22·9, 21·6, 22·8 (or 22·6, 22·5, 22·3, 22·6, 22·4, 22·7) | |
| | | | •³ Process/communication: calculate percentage rejected ^{1,4} | •³ 40% | |

Notes:

1. Correct answer with no working

award 3/3

2. Incorrect answer with no working, however see COR 1

award 0/3

- 3. •¹ can be implied by subsequent working
- 4. Where answer is incorrect, •3 can be awarded if there is evidence of where the percentage has come from
- 5. Where answer is incorrect, •² can only be awarded if there is evidence of the limits used, however see COR 1

Commonly Observed Responses:

1. 60% with no working

award 2/3 ✓✓×

2. 20.5 and 24.5 leading to 0% or 100%

award 1/3 × √×

| 2. | (a) | •¹ Process: calculate basic pay | •¹ 30 × 12·50 = 375 | 3 |
|----|-----|---|---|---|
| | | •² Strategy: know how to calculate overtime pay | $\bullet^2 \ 1.5 \times 12.50 \times 7$ | |
| | | •³ Process: calculate total gross pay | \bullet^3 375 + 131·25 = 506·25 | |

Notes:

- 1. 3 is only available for candidates who have multiplied by 1.5 or 0.5 or 2.5 or equivalent in 2
- 2. For candidates who calculate double time \bullet^2 and \bullet^3 are not available

Commonly Observed Responses:

1. $37 \times 12.50 + 7 \times 6.25 = 506.25$

award 3/3 ✓✓✓

award 2/3 ✓×✓

2. $375 + 7 \times 6.25 = 418.75$ 3. $30 \times 12.50 + 0.5 \times 375 = 562.50$

award 2/3 ✓×✓

4. $30 \times 12.50 + 7 \times 12.50 = 462.50$

award 1/3 ✓××

5. $30 \times 12.50 + 7 \times 2 \times 12.50 = 550$

award 1/3 ✓××

Notes:

Commonly Observed Responses:

| (b) | •² Strategy/process: evidence of 240° or 48 employees | •² evidence | 2 |
|-----|---|--|---|
| | •³ Communication: state probability | \bullet ³ $\frac{240}{360}$ or $\frac{48}{72}$ or $\frac{2}{3}$ or equivalent | |

Notes:

1. Correct answer with no working

award 2/2

- 2. The final answer does not need to be in its simplest form
- 3. 2 can be implied in subsequent working
- 4. With the exception of the answers listed in COR 1, if answer is incorrect,
 - $ullet^3$ can only be awarded if there is evidence of where the numerator has come from
- 5. For answers given in ratio form ●3 cannot be awarded
- 6. incorrect simplification can be ignored

Commonly Observed Responses:

1. $\frac{6}{72}$ or $\frac{12}{72}$ or $\frac{18}{72}$ or $\frac{36}{72}$ or their equivalents

award 1/2 ×√

| Question | | n | Generic scheme | Illustrative scheme | Max mark |
|----------|--|---|--|--|-------------|
| 4. | | | •¹Strategy/communication: one temperature marked correctly on scale | •¹ evidence | 2 |
| | | | •²Communication: other temperature marked on scale and consistent conclusion | •² eg Gillian is correct with justification | |
| | | | Alternative Strategy | | |
| | | | •¹Strategy/communication: substitute into formula | $\bullet^1 F = \frac{9}{5} \times (-3) + 32 \text{ or equivalent}$ | |
| N-4- | | | •²Communication: temperature conversion and consistent conclusion | •² 26·6°F or -4·4°C with consistent conclusion | |

Commonly Observed Responses:

For candidates who convert using the thermometer shown (need not be marked on the thermometer)

1. -3°C is equivalent to approximately 26°F and correct conclusion

award 2/2 ✓✓

2. 24°F is equivalent to approximately -4·5°C and correct conclusion

award 2/2 ✓✓

| 5. | | •¹ Strategy: know how to find monthly payment | •¹ evidence of finding a percentage, adding to 4500 and dividing by 9 | 3 |
|----|--|--|---|---|
| | | •² Process: calculate interest and fee | \bullet^2 7.5% of 4500 = 337.50 | |
| | | • Process: calculate monthly payment | $\bullet^3 (4500 + 337.50) \div 9 = 537.50$ | |
| | | •¹ Strategy: know how to find monthly payment •² Process: calculate amount owed | •¹ evidence of multiplying by 1.075 and dividing by 9 | |
| | | • Process: calculate amount owed • Process: calculate monthly payment | • 3 4837·50 ÷ 9 = 537·50 | |

Notes:

- 1. \bullet^3 must be rounded or truncated to two decimal places unless the answer is a whole number of pounds
- 2. In original strategy, \bullet^3 is only available for calculations of the form $(4500 \pm f) \div 9$ or $(4500 \pm f) \times 9$ where f is the answer to \bullet^2

Commonly Observed Responses:

1. $(4500 - 337.50) \div 9 = 462.50$

award 2/3 ×√√

| Q | Question | | Generic scheme | Illustrative scheme | Max mark |

| Question | | on | Generic Scheme | Illustrative Scheme | Max mark | | | |
|----------|--------|-----|----------------------------|--|-------------|--|--|--|
| 7. | (a) | (i) | •¹ Process: calculate mean | $ \bullet^{1} (2.5 + 4.5 + 3.7 + 3.1 + 3.8 + 3.4) $ $ \div 6 = 3.5 $ | 1 | | | |
| Note | Notes: | | | | | | | |

Commonly Observed Responses:

| (ii) | • Process: calculate $(x - \overline{x})^2$ | • 1,1,0.04,0.16,0.09,0.01 | 3 |
|------|---|--|---|
| | •³ Strategy/process: substitute into formula | $\bullet^3 \sqrt{\frac{2 \cdot 3}{6 - 1}}$ | |
| | • 4 Process: calculate standard deviation | • ⁴ 0·678 | |
| | Alternative strategy • 2 Process: calculate $\sum x$ and $\sum x^2$ | •² 21 and 75·8 | |
| | • 3 Strategy/process: substitute into formula | | |
| | • 4 Process: calculate standard deviation | • ⁴ 0·678 | |

Notes:

1. Correct answer with no working

award 0/3

- 2. Accept rounding or truncation to at least one decimal place for final answer
- 3. ●⁴ can only be awarded for a calculation involving at least two-step including a division and a square root has taken place

Commonly Observed Responses:

| (b) | • Communication: comment regarding mean | •5 eg on average weights in 2017 are higher | 2 |
|-----|---|--|---|
| | • Communication: comment regarding standard deviation | • eg the weights in 2017 are more consistent | |

Notes:

| Question Ger | | on | Generic scheme | Illustrative scheme | Max mark |
|--------------|---|----|------------------------------|--------------------------------------|-------------|
| 8. | 8. (a) •¹ Strategy/process: identify number of gaps | | | •¹ 366 | 2 |
| | | | •² Process: calculate length | \bullet^2 366 × 2 + 367 × 4 = 2200 | |
| Note | | | | | |

Commonly Observed Responses:

| - | 1. $365 \times 2 + 367 \times 4 = 2198$ | award 1/2 ×√ |
|---|---|--------------|
| 1 | 2. $367 \times 2 + 367 \times 4 = 2202$ | award 1/2 ×√ |
| 1 | 3. $367 \times 4 \times 2 = 2936$ | award 0/2 ** |
| 4 | 4. $367 \times 4 \div 2 = 734$ | award 0/2 ** |

| (b) | Strategy/communication: correct substitution in Pythagoras' Theorem | $\bullet^3 \text{ eg } 300^2 - 295^2$ | 4 |
|-----|---|---|---|
| | Process: calculate height or height ² | •4 $h = 54.5$ or $h^2 = 2975$ | |
| | Strategy/communication: correct substitution in Pythagoras' Theorem | $\bullet^5 600^2 + (54 \cdot 5)^2$ | |
| | 6 Process/communication: calculate total length of cable | $\bullet^6 300 + 602 \cdot 4 \dots = 902 \cdot 4 \dots$ | |

Notes:

- 1. \bullet ³ is not available if candidate writes $295^2 300^2$
- e⁴ is available if candidate writes 295² 300² leading to 54·5 ...
 Do not penalise candidates who truncate or round to the nearest whole number throughout

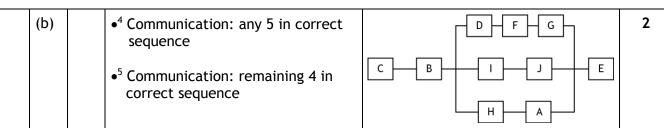

1.
$$\sqrt{(600+295)^2-300^2}+300=1143\cdot 2...$$
 award $2/4 \times \times \checkmark \checkmark$

2.
$$295^2 + 300^2 = 177025$$
 award $1/4 \times \checkmark \times \times$

| Question | | n | Generic scheme | | Illustra | tive scheme | Max mark |
|----------|-----|---|--|------|---|--|-------------|
| 9. | (a) | | •¹ Process: calculate total number of hours | •1 2 | 10 + 96 + 23 | 4 = 540 | 3 |
| | | | •² Process: calculate angles | •2 | 210 hours research 96 hours meetings 234 hours writing | $\frac{210}{540} \times 360 = 140$ $\frac{96}{540} \times 360 = 64$ $\frac{234}{540} \times 360 = 156$ | |
| | | | • Communication: draw and label pie chart consistent with previous working | | iagram cons orking | istent with | |

- •¹ and •² can be implied in subsequent working
 •³ is available if any 2 angles are within tolerance ±1° leading to third angle being outwith tolerance
- 3. \bullet^3 is not available if the three calculated angles do not add to 360°

Commonly Observed Responses:

Notes:

| Question | | n | Generic scheme | Illustrative scheme | Max mark |
|----------|-----|---|--|---|-------------|
| 9. | (c) | | • Strategy: know to and starts to calculate the correct two ways of packing | • evidence of the two correct ways of packing with the front cover facing upwards | 3 |
| | | | • Process: calculate number of boxes for one arrangement | $100 \div 12 \cdot 5 = 8$ $\bullet^{7,8} 50 \div 19 \cdot 5 = 2 \cdot 56 \dots$ $20 \div 2 = 10$ $2 \times 8 \times 10 = 160$ and | |
| | | | • Process/communication: calculate the second arrangement and state maximum number of books | $100 \div 19 \cdot 5 = 5 \cdot 12$ $50 \div 12 \cdot 5 = 4$ $20 \div 2 = 10$ $5 \times 4 \times 10 = 200$ Maximum - 200 books | |

1. Where a candidate only considers volume

award 0/3

- 2. Where a candidate considers more than two arrangements do not award •6
- 3. Where a candidate only considers one arrangement \bullet^7 is still available
- 4. Where a candidate attempts more than two arrangements ●8 is only available where all considered arrangements have been calculated
- 5. Where •⁷ is lost for an incorrect process, •⁸ can be awarded for repeated incorrect process where there are no arithmetic errors in either calculation

Commonly Observed Responses:

1. $100000 \div 487.5 = 205.12...$

award 0/3 ***

| (d) | • 9 Process: calculate cost of shop A | • ⁹ 24 | 3 |
|-----|--|-------------------------------|---|
| | •10 Process: calculate cost of shop C | • ¹⁰ 22 | |
| | •11 Communication: conclusion consistent with working | ● ¹¹ Shop C | |
| | Alternative Strategy • Process: calculate discount for 1 shop | • ⁹ 6 or 7·01 or 8 | |
| | •10 Process: calculate discount for other two shops | • ¹⁰ remaining two | |
| | •11 Communication: conclusion consistent with working | ● ¹¹ Shop C | |

Notes:

1. •11 can only be awarded for comparing 3 costs or 3 discounts

Commonly Observed Responses:

1. Shop A £6, Shop B £22.99, Shop C £22 leading to conclusion Shop A

award 1/3 ✓××

| Question | | n | Generic scheme | Illustrative scheme | Max mark |
|----------|-----|---|--|--|-------------|
| 10. | (a) | | •¹ Process: calculate area of larger circle | $\bullet^1 \pi \times 45 \cdot 35^2 = 6461 \cdot 07$ | 5 |
| | | | •² Process: calculate area of smaller circle | $\bullet^2 \pi \times 36 \cdot 8^2 = 4254 \cdot 47$ | |
| | | | •³ Process: subtract areas of circles | •³ 2206·599 | |
| | | | • Process: calculate the area of the two rectangles | $\bullet^4 8.55 \times 84.4 \times 2 = 1443.24$ | |
| | | | • Process: calculate overall area | • ⁵ 2206·599+ 1443·24 =3649·839 | |

- 1. $\bullet^{1,2}$ are available for candidates who calculate the area of a semi-circle
- 2. For candidates who use πd •² is still available, •⁵ is only available if it is clear that candidate used
- 3. is not available for candidates who double the area of a whole circle
 4. is not available for candidates who add a semi-circle to a rectangle
